

VIKAS VERMA

Senior Node.js Developer | Scalable Backend Systems | API Design | Performance Optimization

+91 9161083119 • vikasvermasde@gmail.com • <https://www.linkedin.com/in/mrvikasverma> • Noida, India

Summary

Backend development professional with 5 years of experience in designing scalable backend systems and optimizing application performance, expert in distributed systems and asynchronous processing. My key achievements include reducing API latency by 40% and improving transaction success rates by 30%. Seeking a Senior Node.js Developer position where I bring my backend engineering and scalable architecture skills to support your mission of ensuring application performance, scalability, and security.

Key Achievements

- **API Efficiency Boost**
Improved API performance, reducing response time by 30% for SaaS applications.
- **Payment Integration Lead**
Integrated multiple payment gateways, improving transaction success rates by 30%.
- **AI Booking System**
Increased booking automation by 50%, enhancing operational efficiency.
- **Database Query Optimization**
Optimized database, reducing query latency by 35% across services.

Experience

- RANNKLY**
Software Engineer
Noida, India
07/2024 - 04/2026
 - Architected asynchronous workflows and background job processing using Redis and BullMQ, implementing retry strategies and idempotent handling for fault-tolerant systems.
 - Built scalable microservices and RESTful APIs using ExpressJS, leveraging event-driven patterns for decoupled and high-performance backend systems.
 - Improved system performance through Redis caching, rate limiting, and database/query optimization, reducing latency and supporting high-throughput workloads.
 - Delivered notification systems and resolved critical production issues, ensuring high availability and system reliability.
 - Led technical design (TRDs), architecture decisions, and POC implementations, driving backend development while leveraging AI tools (ChatGPT, Claude, Gemini) for upgraded productivity.
- WeAssemble**
Backend Engineer
Mumbai, India
04/2022 - 07/2024
 - Architected and owned RESTful APIs using Node.js and ExpressJS, supporting critical workflows and data-intensive backend systems
 - Designed normalized database schemas and optimized SQL queries and MongoDB pipelines, reducing database latency by 35% through efficient indexing and query tuning
 - Diagnosed and resolved complex legacy data and date-time issues, improving data consistency across dependent systems
 - Collaborated with frontend and backend teams to define API contracts and streamline integration across services
 - Implemented authentication and authorization mechanisms, while contributing to architecture discussions, code reviews, and Agile processes to ensure secure and high-quality backend systems

Skills

Node.js • Express.js • MongoDB • MySQL • SQL • NoSQL • REST API • Redis • Caching • AWS • Agile • JavaScript • TypeScript • ES6+ • React • Code Review • Docker • Git • MVC • Jest • jQuery • Ajax • Gen AI • SOLID principles • Unit Testing • S3 • Elasticsearch • JSON • GitHub • Sequelize • Prisma • Mongoose • JWT • Data Structures

Education

- Institute of Technology and Management**
Bachelor of Technology in Computer Science and Engineering
Lucknow, India
- Government Polytechnic Saharanpur**
Diploma in Computer Science and Engineering
Saharanpur, India
- Board of High School and Intermediate Education, Uttar Pradesh**
Higher Secondary Certificate (Class XII)

Projects

RANNKLY

- Engineered scalable backend services and RESTful APIs for a reputation management platform supporting high-volume data processing workflows.
- Enhanced database efficiency through query tuning, indexing strategies, and refined data retrieval mechanisms, reducing response time by 30%.
- Architected a scalable reporting system capable of processing and generating thousands of reports daily with high reliability.
- Built automation and monitoring pipelines for report workflows, increasing operational stability and ensuring timely delivery.
- Applied unit and integration testing practices using Jest to strengthen code quality and deployment reliability.

EVA

- Increased operational efficiency by 80% by designing AI-powered workflow automation solutions, reducing manual processing efforts.
- Improved customer service productivity by 90% by streamlining email booking and communication processes.
- Built intelligent email handling and automated response workflows to increase booking accuracy and reduce turnaround time.
- Coordinated with cross-functional teams to scale backend workflow systems for high-volume operational use cases.

Wanzy

- Engineered and maintained a Payment Service within a microservices ecosystem to support scalable and secure transaction processing.
- Integrated multiple payment gateways including Stripe, Paystack, and PayPal to enable seamless payment experiences.
- Streamlined transaction workflows, webhook handling, and retry mechanisms, increasing payment success rates by 30%.
- Worked with asynchronous processing patterns and service-to-service communication to maintain reliability across divided systems.

Roamy

- Built backend modules for an event and hotel booking platform enabling seamless search, comparison, and reservation management.
- Refined booking workflows and backend performance, contributing to a 30% increase in customer satisfaction.
- Crafted intuitive service flows and efficient integrations to strengthen platform usability and user engagement.
- Partnered with product and engineering teams to deliver scalable and high-performance booking solutions.
